HOSTED MICROSOFT MAIL

SEACOM

Hosted Microsoft Mail

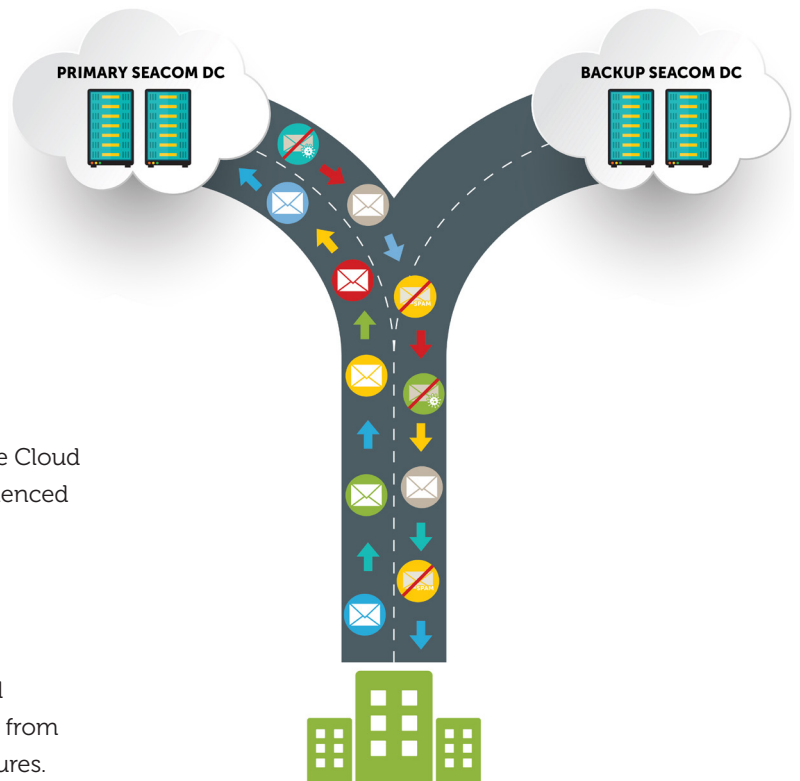

SEACOM Hosted Microsoft Mail is based on Microsoft's Exchange Server 2013. Microsoft Exchange is the preferred and most widely-used messaging solution by enterprises worldwide.

Hosted Microsoft Mail enables users to collaborate more effectively and productively by providing them with the ability to access and share their e-mails, contacts, calendars and tasks anywhere and anytime.

HOW DOES IT WORK?

SEACOM's Hosted Microsoft Mail is deployed in our secure Cloud data centres locally and is maintained by a team of experienced Cloud specialists. This model removes the hassle of clients having to deploy and maintain their own email services, while at the same time providing them with full administration control.

User access is secured through encrypted usernames and passwords. The SEACOM Cloud environment is protected from intrusion by advanced physical and logical security measures.
