**SEACOM**

# Symantec Enhanced Email

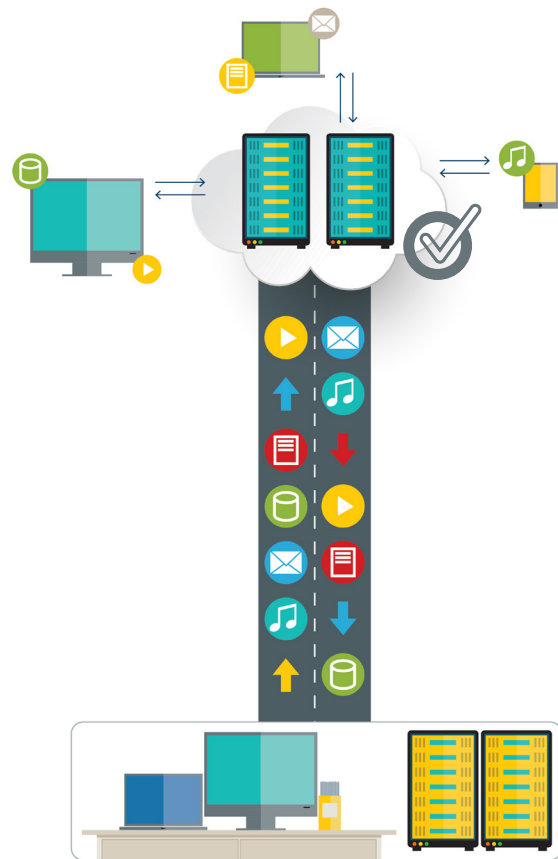

Symantec Enterprise Vault.Cloud is a Cloud-based Email archiving, anti-virus, anti-spam and continuity service that helps organizations store, manage, and discover business-critical information. Enterprise Vault.Cloud securely captures information in a centralized and tamper-proof online repository, with seamless end-user access and rapid search functionality. Plus, the built-in collaborative eDiscovery workflow provides legal teams with roles-based access, expediting the discovery process.

## HOW DOES IT WORK?

SEACOM's Symantec Enterprise Vault.Cloud requires no capital expenditure for additional hardware or software. The only requirement is a suitable internet connection. Every email sent and received is archived at Symantec's data centre.

All email will also be checked for virus or spam before delivered to the recipient.

During an outage of your primary email server (e.g. Exchange server), you can continue to send/receive emails online through Symantec data centre until your email server is restored.

## KEY BENEFITS:

- / Unlimited email archive storage and retention
- / Cloud-based information archiving. No additional hardware, software and plug-ins
- / Symantec Intelligence supporting malware, URL, spam, phishing, and targeted attack protection
- / Intuitive end-user experience with seamless archive access from Outlook, Outlook Web App, Notes or supported web browsers
- / Rapid search functionality and world-class collaborative eDiscovery workflow
- / Rapid deployment, automatic upgrades and support
- / Impose mailbox quotas without inhibiting user productivity
- / Improved server performance and decrease backup and recovery times
- / Ensure high Email availability with the included Symantec Enterprise Vault Mailbox Continuity service
