CORPORATE CONNECT

SEACOM

Corporate Connect

With the ever increasing need for access to critical applications and information, organisations require secure, resilient and flexible connectivity between their branch sites and datacentres. SEACOM's IP enabled MPLS network allows connectivity between customer sites through a single VPN, allowing the convergence of voice, video and data into a single Managed IP network throughout Africa and the globe.

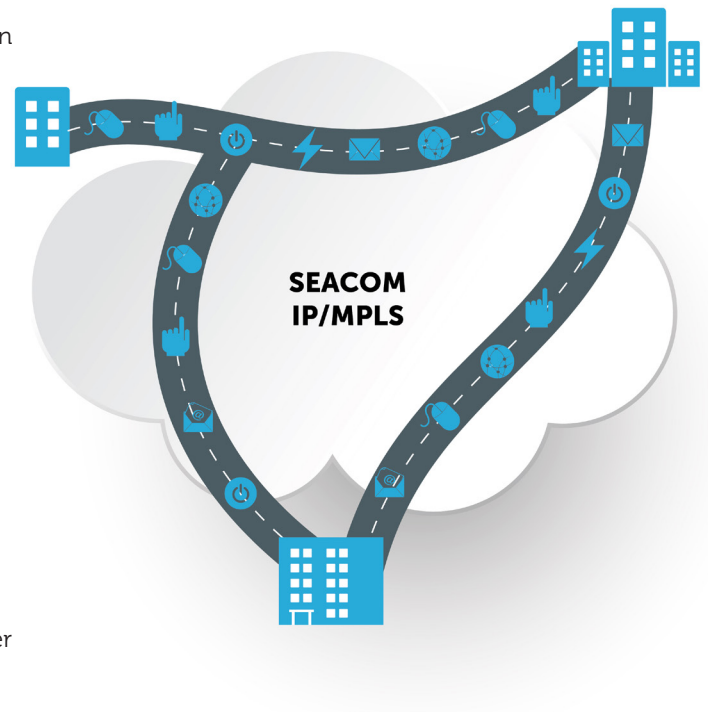

Due to varying application requirements ranging from business critical applications down to general web traffic, the SEACOM MPLS VPN allows classification of traffic into multiple classes of service across the IP network ensuring that the applications that are critical to your business get the priority they require together with an end-to-end managed service backed with industry leading SLA's.

Service features:

- / Global availability through SEACOM's IP/MPLS network
- / Virtually isolated & secure customer network
- / Wide range of bandwidth speeds from 5 Mbps to up to 1 Gbps
- / Multiple Classes of Services (COS) to enable extended customer traffic prioritisation
- / Layer 2 and Layer 3 VPNs solution availability

Technology

SEACOM leverages it's best of breed network capabilities to provide Layer 2 and/or Layer 3 technologies to tailor solutions to best meet customers' point-to-point, point-to-multipoint and multi-point-to-multi-point VPN requirements.

Why choose SEACOM?

- / Wider African and Global coverage across multiple cities and metros
- / End to End SLA guarantees
- / Support for multiple classes of service enabling customer traffic flexibility and preferences
- / Lower latencies through SEACOM multipath and optimised IP/MPLS backbone
