WIRELESS INTERNET ACCESS

SEACOM

Wireless Internet Access

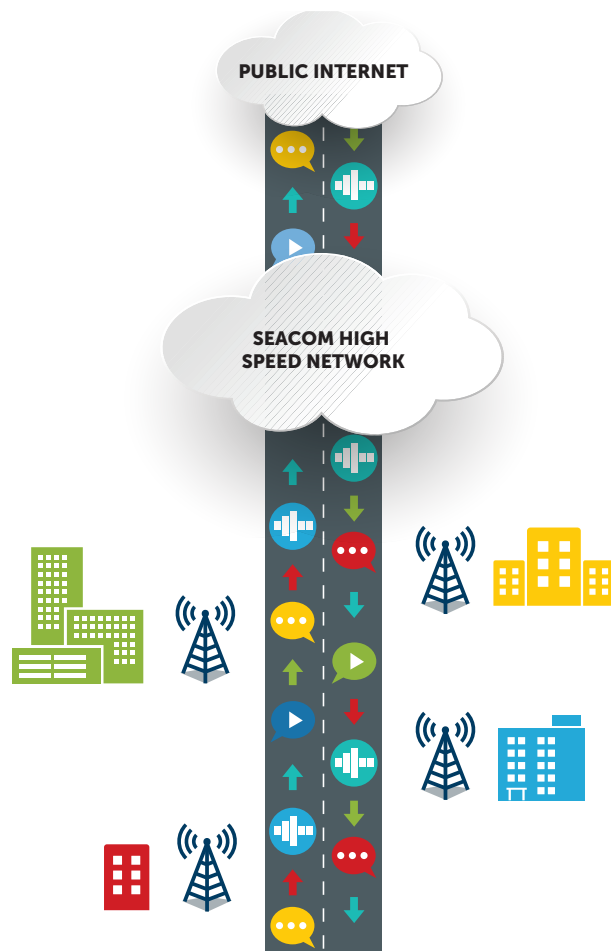

SEACOM's Wireless Internet Access Service provides customers with high-speed, high-availability access to the Internet using last-mile wireless connectivity when fibre is not an option. Services are delivered cost-effectively, right to the front door of businesses around Africa using best in class last-mile microwave connectivity. SEACOM is able to deliver a range of options to suit your business needs from a cost effective broadband wireless solutions, through to enterprise-grade solutions for when connectivity to the Internet is critical to your business operations.

Technology:

The Wireless Internet Access Service is provisioned on last-mile microwave technology and connected to SEACOM's robust global IP/MPLS network, which is interconnected to Tier 1 upstream providers and leading Internet exchanges across Africa and Europe. The network provides low latency access to major CDN caches, and offers high speed, unshaped, symmetrical and asymmetrical services with scalable bandwidth options. Solution options also include both licensed and unlicensed offerings to meet the specific needs of your business.

Key Product Features:

- / Licensed and Unlicensed Spectrum options
- / Uncapped: Unlimited data usage
- / Unshaped: No rate-limiting of any protocols, which ensures maximum usage at all times
- / Customer Premises Device: Included
- / IP Address: /29 for IPv4 (8 addresses) & /56 for IPv6 (virtually unlimited addresses)
